

Dietermann exhibits at the HANNOVER MESSE 2009 - The entire scope of innovative industrial technologies at a single event

The Hannover Messe, the world's most significant technology exhibition, takes place from April 20th until April 24th. For the first time Dietermann attends the fair to introduce the company to a wider public as a major supplier of technologies concerning aluminium and heavy metal casting.

Together with the company CDL Präzisionstechnik from Mönchengladbach, Dietermann presents projects of construction and simulation of casting components as well as casting, CAM simulation and conditioning up to the finish-worked and mounted assembly. Also prefabricated parts that implement special requirements concerning reliability, alloy or surface quality will be shown to the visitors.

We look forward to meeting you in the area Subcontracting, hall 3, stand F41.
